### 3.1.3.5 Fixed Broadband Summary by Geography Type

These two sets of files, described below, contain summary information about the percentage of units served by fixed broadband technologies and certain maximum advertised download and upload speed tiers. The data are taken from the availability data submitted by all fixed broadband providers in their biannual submissions.

#### 3.1.3.5.1 Fixed Broadband Summary by Geography Type: State, County, Congressional District, Tribal Areas, CBSA (MSA)

This file contains summary information on the percentage of units served by fixed broadband technologies and certain maximum advertised download and upload speed tiers in all of the following geographic areas: Nationwide, State, County, Congressional District, Tribal Area, and CBSA.

Files are made available by data as-of date in a zip archive with the following file naming structure:

- *bdc\_us\_fixed\_broadband\_summary\_by\_geography\_{Data As-of Date}\_{Revision Date}.zip*

Specifications for the tabular data in this CSV file are provided in the table below:

| Field                      | Data Type | Example              | Description / Notes                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>speed_1000_100</b> | Decimal (5,4) | 0.0000  | Calculated percentage of units for broadband serviceable locations contained within the Census Place for which providers report fixed broadband service with of at least 1000 / 100 Mbps.       |

### 3.1.3.6 Mobile Broadband Summary by Geography Type

These two sets of files, described below, contain summary information about the percentage of area served by mobile broadband technologies and environments. The data are taken from the mobile availability data submitted by all mobile broadband providers in their biannual submissions.

#### 3.1.3.6.1 Mobile Broadband Summary by Geography Type: State, County, Congressional District, Tribal Areas, CBSA (MSA)

This file contains summary information on the percentage of area served by mobile broadband technologies and environments (outdoor stationary or in-vehicle mobile) in the following geographic areas: Nationwide, State, County, Congressional District, Tribal Area, and CBSA.

Files are made available by data as-of date in a zip archive with the following file naming structure:

- *bdc\_us\_mobile\_broadband\_summary\_by\_geography\_{Data As-of Date}\_{Revision Date}.zip*

Specifications for the tabular data in this CSV file are provided in the table below:

| Field                               | Data Type     | Example              | Description / Notes                                                                                                                                                                                                                                                              |

| <b>mobilebb_5g_spd1_area_st_pct</b> | Decimal (5,4) | 1.0000               | Calculated percentage of area within the Census Place for which providers report 5G-NR mobile broadband service with speeds of at least 7 / 1 Mbps in an outdoor stationary environment.                                                                                         |
| <b>mobilebb_5g_spd1_area_iv_pct</b> | Decimal (5,4) | 0.9879               | Calculated percentage of area within the Census Place for which providers report 5G-NR mobile broadband service with speeds of at least 7 / 1 Mbps in an in-vehicle mobile environment.                                                                                          |

| Field                               | Data Type     | Example | Description / Notes                                                                                                                                                                       |
|-------------------------------------|---------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>mobilebb_5g_spd2_area_st_pct</b> | Decimal (5,4) | 0.9931  | Calculated percentage of area within the Census Place for which providers report 5G-NR mobile broadband service with speeds of at least 35 / 3 Mbps in an outdoor stationary environment. |
| <b>mobilebb_5g_spd2_area_iv_pct</b> | Decimal (5,4) | 0.8561  | Calculated percentage of area within the Census Place for which providers report 5G-NR mobile broadband service with speeds of at least 35 / 3 Mbps in an in-vehicle mobile environment.  |

### 3.1.3.6.2 Mobile Broadband Summary by Geography Type: Census Place

These files contain, for each state, summary information on the percentage of area served by mobile broadband technologies environments (outdoor stationary or in-vehicle mobile) in each Census Place in a selected state.

Files are made available by data as-of date and by state in a zip archive with the following file naming structure:

- *bdc\_{State}\_mobile\_broadband\_summary\_by\_geography\_place\_{Data As-of Date}\_{Revision Date}.zip*

Specifications for the tabular data in this CSV file are provided in the table below:

| Field                 | Data Type | Example              | Description / Notes                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>area_data_type</b> | String    | Total                | Type of area across which broadband data are summarized.<br><br>- <i>Value is one of the following:</i> <ul style="list-style-type: none"> <li>▪ <i>Nontribal</i></li> <li>▪ <i>Rural</i></li> <li>▪ <i>Total</i></li> <li>▪ <i>Tribal</i></li> <li>▪ <i>Urban</i></li> </ul>                                                                                   |
| <b>geography_type</b> | String    | State                | Type of geography across which broadband data are summarized.<br><br>- <i>Value is one of the following:</i> <ul style="list-style-type: none"> <li>▪ <i>National</i></li> <li>▪ <i>State</i></li> <li>▪ <i>County</i></li> <li>▪ <i>Congressional District</i></li> <li>▪ <i>Census Place</i></li> <li>▪ <i>Tribal</i></li> <li>▪ <i>CBSA (MSA)</i></li> </ul> |
| <b>geography_id</b>   | String    | 11                   | Unique geographic identifier for the identified Census Place.                                                                                                                                                                                                                                                                                                   |
| <b>geography_desc</b> | String    | District of Columbia | Short description of the identified geography.                                                                                                                                                                                                                                                                                                                  |

| Field                               | Data Type     | Example              | Description / Notes                                                                                                                                                                    |
|-------------------------------------|---------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>geography_desc_full</b>          | String        | District of Columbia | Full description of the identified geography.                                                                                                                                          |
| <b>total_area</b>                   | Integer       | 40,675               | Area, in square kilometers, of the identified Census Place.                                                                                                                            |
| <b>mobilebb_3g_area_st_pct</b>      | Decimal (5,4) | 0.0000               | Calculated percentage of area within the geography for which providers report 3G mobile broadband service in an outdoor stationary environment.                                        |
| <b>mobilebb_3g_area_iv_pct</b>      | Decimal (5,4) | 0.0000               | Calculated percentage of area within the geography for which providers report 3G mobile broadband service in an in-vehicle mobile environment.                                         |
| <b>mobilebb_4g_area_st_pct</b>      | Decimal (5,4) | 1.0000               | Calculated percentage of area within the geography for which providers report 4G LTE mobile broadband service in an outdoor stationary environment.                                    |
| <b>mobilebb_4g_area_iv_pct</b>      | Decimal (5,4) | 0.9965               | Calculated percentage of area within the geography for which providers report 4G LTE mobile broadband service in an in-vehicle mobile environment.                                     |
| <b>mobilebb_5g_spd1_area_st_pct</b> | Decimal (5,4) | 1.0000               | Calculated percentage of area within the geography for which providers report 5G-NR mobile broadband service with speeds of at least 7 / 1 Mbps in an outdoor stationary environment.  |
| <b>mobilebb_5g_spd1_area_iv_pct</b> | Decimal (5,4) | 0.9879               | Calculated percentage of area within the geography for which providers report 5G-NR mobile broadband service with speeds of at least 7 / 1 Mbps in an in-vehicle mobile environment.   |
| <b>mobilebb_5g_spd2_area_st_pct</b> | Decimal (5,4) | 0.9931               | Calculated percentage of area within the geography for which providers report 5G-NR mobile broadband service with speeds of at least 35 / 3 Mbps in an outdoor stationary environment. |
| <b>mobilebb_5g_spd2_area_iv_pct</b> | Decimal (5,4) | 0.8561               | Calculated percentage of area within the geography for which providers report 5G-NR mobile broadband service with speeds of at least 35 / 3 Mbps in an in-vehicle mobile environment.  |

### 3.2 Data by Provider

On the By Provider tab of the National Broadband Map Data Download page, users must first select the Availability Data As Of date (vintage) and the provider for which they wish to download availability data. Users can then download various datasets for the selected provider, including data on the provider's fixed broadband locations served, mobile coverage areas, and/or supporting data. For information on how filers report fixed broadband availability data, see the Data Specifications for Biannual Submissions of BDC Subscription, Availability, and Supporting Data document at <https://us-fcc.box.com/v/bdc-availability-spec>.
